repo_stats

Calculates and publishes repository metrics

June 8, 2021

Contents

Introduction

This tool evaluates a repository and publishes metrics about it. It tries to be agnostic to how the repository is setup and what build system it uses. It was designed specifically for bazel repositories, so many metrics will be published related to bazel's fetch / query phases.

Ldd Results

These are the dynamic libraries used by the program. Use `apt-file search <file>` to figure out what package you may need to install.

```
linux-vdso.so.1
libpthread.so.0
libm.so.6
libdl.so.2
libc.so.6
/lib64/ld-linux-x86-64.so.2
librt.so.1
```
