Contents

Introduction

This tool evaluates a repository and publishes metrics about it. It tries to be agnostic to how the repository is setup and what build system it uses. Designed specifically for bazel repositories.

Ldd Results

These are the dynamic libraries used by the program. Use `apt-file search <file>` to figure out what package you may need to install.

```
linux-vdso.so.1
libpthread.so.0
libm.so.6
libdl.so.2
libc.so.6
/lib64/ld-linux-x86-64.so.2
librt.so.1
```
